

MetaSync (MS), an *improved* StateVectorSync (SVS)

Vulnerabilities with SVS:

- No solution for overflowing the state vector with *entries*.

Solutions to *overflowing*:

- more interests (scalability, desirability)
- partial sync only (stability, new nodes?)
- other info within interests

MS aims to *patch* these vulnerabilities while still maintaining close-to same performance with SVS!

```
/<group-prefix>/<metadata>/<p-state-vector>
```

```
--sync-interests--  
--data-interests-- → --sync-interests--  
--state-interests--  
--data-interests--
```
